10. CUMULATIVE EFFECTS

National Environmental Policy Act (NEPA) regulations (*40 CFR §§ 1500-1508*), as issued by the Council on Environmental Quality, require addressing the incremental impact of a federal agency's action (in this case, FirstNet's Proposed Action) when added to other past, present, and reasonably foreseeable future actions no matter which agency (federal or non-federal) or person undertakes such other actions. These incremental impacts are referred to as cumulative impacts. Cumulative impacts can result from individually minor, but collectively significant, actions taking place over a period of time by various agencies or individuals (*40 CFR § 1508.7*).

The scope of the cumulative effects analysis involves both the geographic extent of the effects and the timeframe in which the effects could be expected to occur, as well as a description of what resources could potentially be cumulatively affected. When applying the concept of cumulative impacts to a programmatic analysis such as this Final Programmatic Environmental Impact Statement (Final PEIS), additional consideration must be given to existing uncertainty associated with specific project locations that will be selected in the future. The design, construction, and operation of the Nationwide Public Safety Broadband Network (NPSBN) would occur throughout the non-contiguous region of the United States, and specific project sites have not yet been identified. Furthermore, there is currently a wide range of technologies that FirstNet and/or their partners may use to implement and deploy the NPSBN, ranging from new and existing fixed assets to mobile, deployable infrastructure. The range of technologies to be implemented and/or deployed for the NPSBN would consist of individual components at specific locations that are relatively small in size, would likely result in being fairly dispersed in their distribution, and would cover large geographies to achieve the connectivity of the program. As such, it is not possible to quantify the cumulative effects of these projects when combined with other potential projects. Therefore, this Final PEIS addresses cumulative impacts qualitatively.

A cumulative impact results from the additive effect of all projects in the same geographical area. Generally, an impact can be considered cumulative if: 1) effects of several actions occur in the same location, 2) effects on a particular resource are the same in nature, and 3) effects are long-term in nature. The common key factor to cumulative assessment is identifying any potential temporally and/or spatially overlapping or successive effects that may significantly affect resources occurring in the analysis areas (*CEQ 1997; USEPA 1999*).

In evaluating the cumulative impacts of an action, an agency considers the total effects on a resource, ecosystem, or human community of that action and all other activities affecting that resource, no matter what entity (federal, non-federal, or private) is taking the action. Cumulative impacts involve the combined, incremental effects of human activity (*USEPA 1999*). In accordance with NEPA and to the extent reasonable and practical, this Final PEIS considers the combined effects of the No Action Alternative, Preferred Alternative, and Deployable Technologies Alternative at the programmatic level with other past, present, and reasonably foreseeable actions that may affect the resources identified.

The geographic extent of the Proposed Action considered for the cumulative impact analysis includes the area under the jurisdiction of the FirstNet program, specifically the non-contiguous region that is the subject of this Final PEIS. The timeframe considered for this analysis is 50 years.

At the programmatic level, it is not practical to include a list of all possible infrastructure projects in the non-contiguous region. Instead, this cumulative impacts analysis describes projects similar to the Proposed Action with common potential impacts that could have additive effects. States and territories within the non-contiguous region have continued to develop their broadband infrastructure in recent years, with several having completed projects funded through the Broadband Technology Opportunities Program (*BroadbandUSA 2015*). Additional broadband infrastructure projects are underway or have been proposed. Examples of such projects are provided in Table 10-1 below.

Table 10-1: Additional Broadband Infrastructure Projects

Name	Location	Sponsor	Brief Description	Completion Year
Public Safety Interoperable Communications (PSIC) Grant Program	Nationwide	Department of Commerce (DOC) National Telecommunications and Information Agency (NTIA) and Department of Homeland Security (DHS) Federal Emergency Management Agency (FEMA)	\$1 billion grant program to U.S. states and territories for the acquisition of, deployment of, or training for the use of interoperable communications systems that use (or enable interoperability with communications systems that use) reallocated public safety spectrum in the 764-776 megahertz (MHz) and 794-806 MHz bands. Grants were awarded for 6,750 projects, including the installation of 133 new freestanding and 11 new guyed towers, collocation of equipment at 2,710 existing towers and 2,710 existing facilities, 112.9 miles of fiber optic cable, more than 350 training events, and acquisition of over 75,000 radios. (<i>NITA 2016</i>)	Concluded in 2012
TERRA	Alaska	General Communication, Inc.	Development of a broadband communications network across the state, including remote regions. Projects have been completed in the Southwest and more recently in the Northwest Arctic with additional construction in 2014 in the Northwest and along the Yukon River (<i>CGI 2015</i>).	2011-2014
Broadband Linking the American Samoa Territory (BLAST) Project	American Samoa	American Samoa TeleCommunications Authority	The BLAST project includes build-out of a land-based fiber network combined with a 350 kilometers interisland submarine cable network connecting Fogagogo, Tu'tuila, Ofu, Luma, Ta'u and Aunu'u Islands (<i>WFN Strategies 2016</i>).	Largely completed 2015
Gigabit Island Plan	Puerto Rico	Puerto Rico Broadband Taskforce (a public-private partnership)	Establishes strategic goals to further expand high speed broadband networks island-wide across Puerto Rico, involving new infrastructure as a component (<i>PRBT 2015</i>).	2020

Name	Location	Sponsor	Brief Description	Completion Year
Measuring Broadband Hawaii	Hawaii	State of Hawaii Department of Commerce and Consumer Affairs (DCCA)	In collaboration with the Federal Communications Commission's (FCC) Measuring Broadband America, the goal of this project is to "better inform Hawaii consumers about their Internet service performance and to collect broadband performance data that DCCA can use in its efforts to improve access to broadband service across the State." DCCA activities include supporting public-private efforts to develop broadband infrastructure. (DCCA 2016)	Ongoing

The analysis herein considered the alternatives discussed in Chapter 2, Description of the Proposed Action and Alternatives, and other programmatic-scale actions. Cumulative effects analysis of individual projects and other past, present, and reasonably foreseeable future actions relevant at the local level can be addressed as part of future project-specific NEPA reviews. Project-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work.

The potential impacts associated with the Proposed Action would result from the collocation on existing infrastructure; construction of new infrastructure and/or accessory components; use of existing fiber facilities; installation of new conduit; deployment of satellite phones and/or satellite technology; installation of microwave facilities; and utilization of deployable technologies. As described in Chapters 3 through 9, the effects as a result of the Proposed Action would not result in potentially significant impacts at the programmatic level based on the impact significance criteria and ratings presented in this Final PEIS. Impacts could occur as a result of other ongoing telecommunications infrastructure development, including those projects described above as well as others in the future; however, when combined with the potential impacts associated with the Proposed Action, incremental impacts to the natural and human environment¹ are not expected to be significant at the programmatic level. The project types that involve new construction and/or ground-disturbing activities would tend to be limited by their nature in the extent and duration of their effects, and these projects would typically implement appropriate best management practices and/or mitigation measures to further reduce the already limited potential impacts. Similarly, effects associated with project operations are not expected to be significant at the programmatic level. Taken together, these projects are not expected to result in significant incremental cumulative impacts to either human health or the environment.

¹ The human environment is the natural and physical (e.g., structures) environment, and the association of people and their activities to those environments.
